Liquid gelatin produced from a selection of exceptionally pure raw materials, exclusively of porcine origin.

Qualified for the elaboration of products for direct human consumption in the field of the regulated use in Œnology. In accordance with the regulation (EC) n° 606/2009 and the Food Chemical Codex.

**SPECIFICATIONS**

**GECOLL SUPRA** is characterised by a high and stable surface charge density depending on the pH.

**GECOLL SUPRA** is a fining agent intended for:
- Promoting the organoleptic potential of wines. **GECOLL SUPRA** eliminates the tannins which are responsible for aggressive or astringent characteristics, and restores roundness and suppleness in wine with no aromatic expression modification.
- Stabilising the colloidal state (colouring matter stabilisation).
- Clarifying wines and musts, by eliminating haze particles.

**ŒNOLOGICAL APPLICATIONS**

**GECOLL SUPRA** is recommended for treating:
- red wines of high cellaring potential, primeur red wines with highly reactive tannins.
- rosé wines (and dry or sweet white wines).

**GECOLL SUPRA** favours clarification of must during settling and contributes to softening of the final pressings.

**PHYSICAL CHARACTERISTICS**

Aspect .................................................. liquid
Colour .................................................. clear, slightly amber
Density ............................................. 1032 ± 2

**STORAGE**

- Store in original sealed packages, in a cool dry place (off the floor) in an odour-free environment.
- Optimal date of use:
  - 2 years for 1.05 kg.
  - 30 months for 5.25 kg, 21 kg and 125 kg.
  - Refer to the instructions mentioned on the packaging, unopened packaging.
- Use quickly after opening (if the container is properly sealed).

**PACKAGING**

- 1.05 kg canister – 15 x 1.05 kg box.
- 5.25 kg canister – 4 x 5.25 kg box.
- 21 kg jerrican.
- 125 kg barrel.

**PROTOCOL FOR USE**

**OENOLOGICAL CONDITIONS**

Temperatures: there are no particular recommendations under normal wine preservation conditions.

**GECOLL SUPRA** action is adapted to the pH of the wine.

**IMPLEMENTATION**

It must be rapidly homogenised into the total wine volume. The gelatin must be added progressively during a pump-over, adding the product in small amounts at a time, to ensure correct dispersion into the wine mass. This addition must be accompanied by vigorous mixing; pumping over one third of the tank is generally sufficient.

It is recommended to use an OENODOSEUR.

For treatment in barrels, it is sometimes recommended to dilute GECOLL SUPRA in a small volume of water (250 mL/1000 mL of product). Depending on the types of wine treated and their haze level, the addition of SILIGEL or MICROCOL is recommended to optimize fining agent action (flocculation) and clarification (sedimentation, lees settling): Bentonite is generally added after the gelatin. SILIGEL and/or tannins are added before the gelatin.

**DOSAGE**

- Based on previous laboratory trials, the success of the fining depends on the preparation of the gelatin, its addition, the fining follow-up and « levée de colle » (racking).
- Average dosage: 40 to 100 mL/L.

**STORAGE**

**SPHINX** action is adapted to the pH of the wine.

**GECOLL SUPRA** action is adapted to the pH of the wine.
