QUERTANIN® CHOC’

Stave oak heartwood quality ellagic tannins and gallic tannins, utilising LAFORT’s Instant Dissolving Process (IDP).
For post-vinification use in red, rosé and white wines.
Qualified for the elaboration of products for direct human consumption in the field of the regulated use in oenology.
In accordance with the regulation (EC) n° 606/2009.

SPECIFICATIONS AND ŒNOLOGICAL APPLICATIONS
Used during fining, QUERTANIN® CHOC’ is a preparation of ellagic and gallic tannins that:
• Enhances wine structure and palate length.
• Regulates oxidation-reduction phenomena during maturation in barrels or during micro-oxygenation.
• Creates an environment rich in ellagic tannins in used barrels, similar to that of new barrels.
• Improves clarification.
After the addition, it is recommended to carry out normal rackings until fining or bottling preparation.

EXPERIMENTAL RESULTS
• Tannin content extracted from the oak is lower in used barrels. The ellagitannin protective effect is decreased and the wine becomes subject to premature oxidation. Adding QUERTANIN® CHOC’ allows recreation of the buffering qualities provided by tannins extracted from new barrels thus protecting the wine from the oxidation phenomena.
• QUERTANIN® CHOC’ allows a significant decrease in reductive characters, such as light mercaptans, guaranteeing improved preservation of aromatic freshness.

IMPLEMENTATION

Thanks to the IDP process, QUERTANIN® CHOC’ can be sprinkled directly onto the wine during a pump-over homogenisation (1 to 10%). It is recommended to add QUERTANIN® CHOC’ at least two weeks before bottling.

For white and rosé wines stabilised with CMC (tartaric stabilisation), the addition of tannins towards the end of ageing may affect the colloidal stability; it is recommended to perform a protein stability test again systematically after addition.

STORAGE

- Store in original sealed packages, in a cool dry place (off the floor) in an odour-free environment.
- Optimal date of use: 4 years.
-Opened bags properly re-sealed: 4 months.

PACKAGING

Resealable doypack of 500g - 10 kg box

PROTOCOL FOR USE

DOUSAGE

It is specified in the Oenological Codex that tannins “must not change the olfactory properties and the colour of wine”. The dosage rates will therefore vary in function of the wine matrix, and shall be determined after trials.

- Preservation of aromatic freshness in white and rosé wines: 2 to 5 g/hL (20 - 50 ppm).
- Red wine maturation: 5 to 10 g/hL (50 - 100 ppm).

CHEMICAL ANALYSIS

- Tannins > 65 %
- Humidity < 10 %
- Ash < 4 %
- Insoluble substances < 2%
- Arsenic < 3 ppm
- Iron < 50 ppm
- Lead < 2 ppm
- Mercury < 1 ppm
- Cadmium < 1 ppm
- Iron < 50 ppm
- Lead < 2 ppm
- Mercury < 1 ppm
- Cadmium < 1 ppm

PHYSICAL CHARACTERISTICS

- Aspect: granulated
- Solubility: complete
- Colour: dark brown

PROTOCOL FOR USE

DOUSAGE

It is specified in the Oenological Codex that tannins “must not change the olfactory properties and the colour of wine”. The dosage rates will therefore vary in function of the wine matrix, and shall be determined after trials.

- Preservation of aromatic freshness in white and rosé wines: 2 to 5 g/hL (20 - 50 ppm).
- Red wine maturation: 5 to 10 g/hL (50 - 100 ppm).

IMPLEMENTATION

Thanks to the IDP process, QUERTANIN® CHOC’ can be sprinkled directly onto the wine during a pump-over homogenisation (1 to 10%).

It is recommended to add QUERTANIN® CHOC’ at least two weeks before bottling.
