

Acetic bacteria MEDIUM

Selective and specific medium used for the identification and quantification of acetic bacteria in juice and wine.

Medium in compliance with resolution OIV-OENO 206/2010.

● Composition

Peptone, yeast extract, meat extract, dextrose, agar, distilled water + Selective compounds*.

● Presentation

Of beige colour, this medium is packaged in ready to use agar Petri dish 55 and 90 mm.

pH (25°C): 5,0.

10 Petri dishes per pack (vacuum packed).

● Storage and expiration

6 months at +2°C / +8°C from manufacturing date (AA/MM/JJ).

● Incubation protocol

6 days at 25°C.

● Colonies aspect

- Light brown colonies, shiny, viscous and flat with a characteristic odour.

- To see the colonies better, we recommend using black coloured membranes.

● Organisms used to test sterility and fertility

Positive Control: strains of acetic bacteria identified by genetic analysis.

Negative control: Interlaboratory analysis.

* Inhibited microorganisms: yeast, lactic acid bacteria and moulds.

* N°CAS inhibitor: 92-52-48, 69-57-8, 7681-93-8; < 0.025 % in weight.

● Article code / Medium colour code
