**TANIN VR SUPRA® ÉLÉGANCE**

Instantaneously dissolving (Instant Dissolving Process, **IDP**) ellagic and proanthocyanidic tannin preparation for red wine vinification.

*Qualified for the elaboration of products for direct human consumption in the field of the regulated use in oenology. In accordance with the regulation (EC) n° 606/2009.*

**SPECIFICATIONS AND OENOLOGICAL APPLICATIONS**

**TANIN VR SUPRA® ÉLÉGANCE** combines the effects of different tannins selected and prepared for optimal technological efficiency, without adding bitterness and astringency:

- Anti-oxidant action to protect the colour.
- Wine structural improvement by supplementation of the midpalate.
- Precipitation of wines’ natural protein for a better preservation of endogenous tannins («sacrificial» effect).
- Inhibition of natural oxidation enzymes (laccase, polyphenol oxidase) during harvesting of *Botrytis*-affected vintages (more efficiently than **SO**$_2$).
- Vinification of grapes that show a phenolic maturity deficiency or an unfavourable tannin/anthocyanin ratio for colour stabilisation.
- Improves fining.

IMPLEMENTATION

The IDP process enables perfect solubility in wine and thus imposes no preliminary dissolution of the tannins in water. Homogenous introduction into the bulk of the must or wine is, however, advised.

- On sound fruit: add the total dosage during the first pump-over at the start of alcoholic fermentation.
- For cold pre-fermentation macerations (cold soaking): add the total dosage during the first pump-over at the start of alcoholic fermentation.
- On a Botrytis-affected harvest: add the total dosage early ideally in the hopper.

STORAGE

- Store in original sealed packages, in a cool dry place (off the floor) in an odour-free environment.
- Optimal date of use: 4 years.
- Opened bags properly re-sealed: 4 months.

DOSAGE:

- Structural improvement: 10 to 20 g/hL (100-200 ppm).
- Colour stabilisation: 20 to 40 g/hL (200-400 ppm).
- Botrytis-affected fruit: 30 to 80 g/hL (300-800 ppm).

PROTOCOL FOR USE

ŒNOLOGICAL CONDITIONS

- High anthocyanin content and/or low tannin content. Anthocyanin - tannin ratio of >4.
- Low maturity of grape tannins preventing high phenolic extraction.
- Botrytis-affected harvest: laccase activity > 2 U/mL.

PACKAGING

1 kg bag - 10 kg box.
5 kg bag - 10 kg box.
